EXPERIENCE

Software Engineer Intern — Payment Infrastructure

Cashfree Payments, Bengaluru, India | Jan 2026 - Present

- Designed and deployed dynamic payment routing system across multiple payment channels (UPI, cards, netbanking, wallets) with real-time gateway selection and intelligent fallback strategies; improved transaction success rate by 6% during peak load while maintaining 99.9% uptime.
- Reduced payment infrastructure security vulnerability surface by 40% through automated CVE scanning, targeted patching, and comprehensive security policy enforcement across all production dependencies; implemented infrastructure-as-code compliance.
- Owned full-stack infrastructure reliability—from system design to production deployment, monitoring, and incident response for payment processing systems handling millions of transactions.

Infrastructure & Automation Specialist

Outlier (Scale AI) & Personal Projects | Dec 2024 - Present

- Designed and executed automated testing infrastructure for complex systems; built CI/CD pipelines with comprehensive evaluation hooks and audit trail logging for production workflows.
- Developed ETL pipelines and data processing infrastructure handling large-scale datasets with data quality guardrails and automated error detection; optimized performance across multiple systems.

INFRASTRUCTURE & SYSTEMS PROJECTS

Automated Testing Infrastructure — CI/CD Pipeline

Python, Selenium, FastAPI, Docker, GitHub Actions, CI/CD | Jun - Sep 2025

- Built end-to-end CI/CD automation system with orchestration across 4 production microservices; achieved 95% system test coverage with complete audit trail logging and compliance monitoring.
- Implemented automated evaluation and feedback capture pipelines; reduced manual operational overhead by 60% while maintaining regulatory compliance for payment-regulated workflows.

Production API Infrastructure & Optimization

Python, FastAPI, Docker, Kubernetes, AWS | Sep - Oct 2025 & Feb - Jul 2025

- Optimized and operationalized production APIs serving high-scale workloads: reduced latency from 620ms to 310ms across 50,000+ requests through infrastructure-level improvements and caching strategies.
- Designed systems with production-grade reliability patterns: model versioning, automated rollback, health monitoring, graceful degradation, and fallback strategies for mission-critical systems.

TECHNICAL SKILLS

Languages: Python, Java, C++, Bash, SQL

DevOps & Infrastructure: Docker, Kubernetes, GitHub Actions, CI/CD, Git, Linux/Unix, AWS (EC2, S3, Lambda, EKS)

Backend & Systems: FastAPI, Flask, Spring Boot, REST APIs, Microservices Architecture, System Design

Production Operations: Monitoring (Prometheus, Grafana), Logging, Security Scanning (CVE), Automated Patching, Incident Response

Databases & Data: MySQL, PostgreSQL, MongoDB, ETL Pipelines, Data Quality Assurance

Infrastructure-as-Code & Automation: Configuration Management, Infrastructure Automation, Deployment Automation, Compliance Enforcement

ACHIEVEMENTS

- Guinness World Record — Microsoft AI Fest, largest simultaneous AI model demonstration (Apr 2025).
- Finalist — Smart India Hackathon 2024, Top 30 of 600+ national teams (Oct 2024).
- Competitive Programming — 1000+ problems solved; Codeforces Rating 1235, strong algorithmic and system design fundamentals.
- Dean's List — Top 1% of university cohort; demonstrated excellence in core CS and mathematics courses.

CERTIFICATIONS & TRAINING

Cloud Computing & Infrastructure — NPTEL, IIT Kharagpur (Elite, 2024) | Introduction to ML & Systems — NPTEL, IIT Kharagpur (Elite + Silver, 2024)

EDUCATION

Bachelor of Technology — Computer Science and Engineering | Lovely Professional University, Punjab | Sep 2022 – 2026 | CGPA: 8.67
